

# JSW Steel arm to invest \$145 mn in US plant

**RAJESH KURUP**  
Mumbai, May 3

---

**JSW STEEL USA**, a subsidiary of JSW Steel, will invest \$145 million (about ₹1,200 crore) to upgrade its plant in Mingo Junction, Ohio. The company would use the proceeds to upgrade its operations such as installation of Vacuum Tank Degasser that will help in substantially lowering carbon emissions. It will also implement a dynamic soft reduction technology in its casting operations and upgrade supporting facilities at the plant.

"These new investments

reiterate JSW's commitment to a sustainable and green future. These investments and projects will help us in producing high quality melted and manufactured in the USA steel products required by our customers in the infrastructure and renewable energy sectors," JSW Steel USA director Parth Jindal said.

The investments will enhance manufacturing capabilities in the US and enable it to produce 'made in USA' slabs for the renewable energy and infrastructure sectors. The upgrade will enable JSW Steel USA to promote centreline soundness of the cast steel slabs.
