

# 'Explore options for making green steel'

## Our Bureau

New Delhi

Union Minister for Steel, Jyotiraditya Scindia, on Tuesday, emphasised the need for adopting a participatory approach to define the roadmap for green steel. The Ministry had on Monday approved the formation of 13 task forces identifying action points for each aspect of green steel production.

These will focus on various aspects of green steel production, including raw materials, technology, and policy frameworks.

### **TASK FORCE**

The task force will include various stakeholders of the steel industry, including steel industry experts, members of

the industry, academia, also members from concerned ministries.

The move – to set up task force – is expected to drive the development and adoption of sustainable steel making practices and technologies in India. This will not only help reduce the carbon footprint of the steel industry but also contribute to India's efforts to combat climate change, as per a statement issued by the Ministry.

Addressing stakeholders at the seventh meeting of the Integrated Steel Plants Advisory Committee, Scindia reiterated that as the world's second-largest steel producer India needs to become most responsible through green steel adoption. He asked the Committee to work together to define the way forward for the industry.
