

# GEG expects aerospace biz to grow at least 15-20%

**DEEPAK PATEL**  
New Delhi, 5 May

Godrej Enterprises Group's commercial aerospace manufacturing unit is likely to grow by 15-20 per cent annually till FY32 as demand continues to be robust and production remains largely stable despite the West Asia conflict, the unit's business head Maneck Behramkamdin said on Tuesday.

The group's commercial aerospace business clocked a total revenue of ₹435 crore in FY26. This unit has seen 30 per cent year-on-year (Y-o-Y) revenue growth each year since Covid, Behramkamdin, who handles overall aerospace manufacturing business, including space and defence, told *Business Standard*.

The company is working to build its own design platforms, especially for components such as servo actuators and electromechanical actuators. This comes as it looks to move up the value chain from a build-to-print manufacturer to a design-led player.

Explaining this shift, Behramkamdin said the aim was to develop intellectual property and become

“a design house for actuation systems” over the next few years.

These systems were critical aircraft components that control movement of parts such as wings and landing gear, making them a high-value segment in aerospace manufacturing. “The focus will be on working on our own design platforms in the next four to five years,” he said.

The company has a small but growing design team and was also partnering external experts to build capabilities in areas such as modelling and analysis. These were essential for developing flight-critical components.

On expansion, he said the group has committed around ₹500 crore towards a new aerospace manufacturing facility, near Navi Mumbai to handle more complex components, which will be significantly larger than its existing plant in Mumbai.
