Chennai

Relux Electric Pvt Ltd, an EV charging infrastructure provider, has joined hands with the Tamil Nadu Green Energy Corporation Ltd (TNGECL), to set up 500 EV charging stations across the State to drive its transition to an electric mobility hub.

Relux Electric and TNGECL will conduct a feasibility study to identify government-owned lands across Tamil Nadu for the charging stations.

This initiative aligns with the State's vision to expand EV infrastructure, reduce carbon emissions, and promote cleaner, sustainable transportation, said a re-

lease. "This collaboration between the State and Relux comes at the right time to accelerate EV adoption in Tamil Nadu. It will be a significant step towards transforming Tamil Nadu into an electric mobility hub, and will open up opportunities to further strengthen charging infrastructure at customer-friendly locations," said S Karthikeyan, Managing Director, Relux Electric Private Ltd.

Currently, Tamil Nadu has around 1,300 charging stations and is developing a digital map to help users easily locate charging points. TNGECL also plans to establish dedicated EV hubs equipped with public-friendly facilities, said a statement.
