

Tata Steel Nederland to sell green steel to Ford

Our Bureau

Mumbai

Tata Steel Nederland has signed a memorandum of understanding with Ford in Europe to supply the carmaker with Zeremis green steel once IJmuiden steelworks switches to green hydrogen-based steelmaking.

Securing the future supply of more environmentally-friendly produced steel is essential to enable Ford to reach its 2035 carbon neut-

rality target. The agreement makes Ford the first customer committed to offtake green steel that Tata Steel plans to produce via the hydrogen route, which is a more sustainable and cleaner than the current method of making steel.

As Ford already targets the use of low-CO2 steel in its all-new all-electric, medium-sized crossover (production begins in Europe in 2023), the company intends to explore opportunities to use other green steel products.
