

Gentari looks to expand business in India

Rishi Ranjan Kala

New Delhi

Malaysian clean energy solutions provider, Gentari, is keen on expanding in India, focusing on utility-scale renewable energy (RE) projects, manufacturing green hydrogen, public EV charging infra and leasing EVs to logistics companies.

Gentari has three core portfolios — renewable energy, hydrogen, and green mobility. CEO Sushil Purohit said the company is positioning itself as an integrated clean energy provider targeting the three segments globally, including India.

RENEWABLES

“...We are looking at India to produce green hydrogen and export it... With India also consuming hydrogen, it will provide scale, which will bring down costs,” Purohit told *businessline*.

Purohit said, “In renew-

We are doing feasibility projects on producing green hydrogen and converting it to ammonia and also looking at exports

Gentari CEO

ables, we plan to have capacities of 30-40 GW, including in India. We will focus on utility-scale solar and wind projects. Similarly, we aim to produce 1.2 million tonnes per annum (mtpa) of green hydrogen...”

Gentari has deployed 162 charging points in seven charging hubs across four cities, which it will scale up to ten cities by 2023-end, Purohit said. “We also have Vehicle As A Service (VAAS) offering where we have deployed close to 1,000 electric

three-wheelers in India. We are now looking to scale it up by 2023-end to 4,000 three and four-wheelers across 10 cities,” he added.
