

Tata Steel Mining to install energy management solutions to cut carbon footprint

Our Bureau

Mumbai

Tata Steel Mining has signed a memorandum of understanding with French cleantech company METRON, a leading provider of cloud-based energy management solutions.

The partnership aims to design and implement an advanced energy management and optimisation platform for the company's ferro alloys plant located at Athagarh in Cuttack district of Odisha.

As per the MoU, the software solution developed by METRON will enable Tata Steel Mining monitor, analyse, and optimise energy consumption in real time and reduce carbon footprint across plant utilities.

It will help the company digitalise energy to decarbonise territories, reduce costs and improve overall operational efficiency.
